

INTEDEX

Data Synchronisation — SAP R/3

It may be interesting to know that if you were to sit on the planet Neptune and look back, the Sun itself would be the size of the full stop at the end of this sentence. And if the Sun was to be drawn the size of a pea, Neptune would be 14km off the page. So far removed that it would be hard to consider what the purpose of the Sun actually is and its integral relevance.

SAP systems are similar. They start off with a big bang, but as time goes on Dev and Qa orbit further and further away from Production until the gaps in data are so vast that they lose their relevance. Keeping these supporting systems relevant

requires ever increasing resources and effort. Effort costing time and money.

Intedex remedies this by revitalizing the data on supporting systems, drawing them back into your planetary system—making them relevant. Ensuring that your support systems once again add value, minimize risk and support the teams that depend on them.

Intedex rebuilds systems keeping configuration and ABAP programs intact, system settings unchanged as well as User Login and Authorisation Data.

INTEDEX copies data between SAP systems. Only data that you need is synchronised, allowing you to manage your systems more effectively. Differentiating between master data and transaction data, Industry-Solutions and Custom Development. Intedex can even specify a slice of data to be refreshed. 80% of the time you only need Master data that is rarely larger than 20% of your data. Master data that can be refreshed in minutes.

SPECIAL INTEREST POINTS

- EASY SYSTEM REBUILD
- REVIVE DEV AND QA FROM PRD
- NO HARDWARE REQUIREMENTS
- SLICE PORTIONS OF DATA

If you lose a week each month rebuilding QA and only rebuild DEV once a year, then you should be using INTEDEX.
